

Bitcore Guide:

Advanced Coin Control – never miss an airdrop again

In this step-by-step guide we will show you how to securely make a transaction without the need to re-register your address for the weekly Monday airdrop.

The basic concept is to enable coin control first and then select the same address as the outgoing address for change-money.

Note: Currently only Bitcore Core (Bitcore-QT) wallet supports this feature.

Download Bitcore-QT here: <https://github.com/LIMXTEC/BitCore/releases>

Your *Bitcore* Team

Step 1: Start bitcore-qt.exe

Step 2: Click on **Settings** → **Options**

Step 3: Within the **Options** dialogue, click on **Wallet**

Step 4: Set a mark to **Enable coin control features** (see image below)

Step 5: Now close the **Options** dialogue

Step 6: Select the **Send** tab - You now have the option **Inputs...** available. Click it.

Step 7: In the **Coin Selection** dialogue choose **Tree mode**

Step 8: Now select the address (public key) you want to spend from (see image).

> <input type="checkbox"/> (2)	10.29976700	B save			
> <input type="checkbox"/> (2)	6.18000000	old mining			

Step 9: Now right click on any displayed address that is already [registered for the weekly airdrop](#) and select **Copy address**.

Step 10: Click **OK** to close the **Coin Selection** dialogue.

Step 11: Here comes the important part: In the **Send** tab set a mark to **Custom change address** and paste your address.

This was the crucial step you always need to make when creating a transaction to ensure your funds are kept on your registered address. Otherwise the Bitcore-qt wallet will create a new (and unregistered) change address.

Now you can continue with the standard procedure to create a transaction: Just enter a receiver address (**Pay to**), choose an **Amount** to send, optionally enter a **Label** and click **Send**.

That's it! By following steps 6 – 11 every time you create a transaction you will ensure to never miss an airdrop again!
